

Main - ApartmentComplex

This is a longer term project for me. I'm in the process of designing a system of modular shelves that will allow me to perfectly make use of the main room of my apartment. It will allow me to crawl through a crawlspace to get to the back of my entertainment center and computer desk so that I can more easily manage the wiring.

Nice improvements this should bring:

- * the computer desk will be slightly higher so that MyHugePcCase will actually fit underneath it.
- * 3d space will be more efficiently used.
- * the system will be modular so that I can add extra shelves or move the shelves up and down if desired.
