

Main - EudoraMail

Desired features:

* When using Directory Services, I can search names, but it's not possible to add comments to names. Eudora should allow commenting of certain names within the Directory Services interface so that future searches (from that same computer) would also show the additional information. For instance, if I search for "James" and it shows 7 different entries, I'd like to label the relevant one as the one I'm interested in. I shouldn't have to add it to my address book in order to do that.
