Java Games I (Geoff Fortytwo) Wrote

These are all games (or beginnings of games) that I created years ago. They're pretty basic, but I remember enjoying the time I spent working on them.

[SimpsonVaders](#) (a Space Invaders clone using The Simpsons)

[Bloids](#) (a Tetris clone)

[Snazzy](#) (This is a single room of a platformer. It was a proof of concept. Jumping and moving from platform to platform all works nicely. I also implemented the ability to swing on a rope, but it's not used in this app.)

[AntsBatsSpiders](#) This was never actually turned into a real game. I wanted to recreate a game called SuperFly (an old DOS game I really enjoyed), but I never got very far with it.
