

I'll upload pictures in the future, but for now I'll just list the cool tools that I have.

Woodworking tools:

- benchtop jointer
- benchtop bandsaw
- 14.4v cordless drill
- 24v cordless drill
- scroll saw
- 13" planer
- compound miter saw
- drill press
- circular saw
- "Senco FinishPro 18", 18 guage brad nailer. (5/8" to 2" brads)
- 2 gallon air compressor (up to 135 psi)
- jigsaw
- hand held finishing sander
- 10" table saw (this is horrible. I'm getting a good one as soon as I get a garage.)
- router
- wood lathe

Metalworking tools

- angle grinder. This is great for the occasional times that I need to cut metal. For instance, the rail for my keyboard tray was too long for my desk, so I just pulled out my angle grinder and cut a few inches off the end.

Sewing and other fabric related tools

- White Rotary 979 40-Stitch Function Electronic Sewing Machine
- a screen printing kit

Cement, clay, and plaster related tools

- I just have some trowels and other basic tools for this sort of thing.

Painting tools

- Lots of paints and brushes.

Misc supplies

- I have numerous varieties of tapes, adhesives, strings, and ropes.

Things I might want

- A plotter-cutter would be very cool. It would make it easy to make stencils for screen printing.
- A 36" printer would be cool. It would allow me to make huge signs!

Main - MyTools

- A laser cutting tool for cutting wood and metal precisely would be very cool. These things seem to cost thousands of dollars, so I don't think I could excuse it for hobby work, but I'm trying to find one on ebay for under \$1000.
